

Hi I would like to start by saying why the environment minister is so excited to announce that we in Australia will have the largest marine park in the world, as a fisher and a processor in the southern part of w.a I would like to have someone come to meet with me to discuss how you can put lines on a map and say it's off limits . I'm not against the idea but before closing big chunks of ocean please talk to the people who have invested many years of hard work and considerable amount of money also employ families in the process.I believe that our fisheries is very well managed and is sustainable it is a renewable resource and it should be enjoyed by the seafood lovers. So please let's not have a knee jerk reaction just to please environmental groups we pay our taxes and we also have votes , in saying that I would like someone to be in touch with me to talk . Thank you.
