

Dear member, You surely realize we can't run this planet down any further. Are we leaving any sustainable ecological future for the talent and love of our children to give their lives to? We need something beyond business lobby growth and economic magnitude to decide what is the policy for our future generations, there is no economy that is not inclusive of ecology. You know this it is an obvious truth the same as we can't have peace in a world of inequality amongst nations. These are fundamental tenants of mature understanding.

"In 2012 Labor released the world's largest network of marine national parks and protected areas. The network was based on the latest science and extensive community consultation. These were promptly scrapped by Abbott, and now Turnbull has directly attacked them.

At a time when coral bleaching is having devastating effects on our reefs, the Turnbull Government is halving the area of the Coral Sea placed in Marine National Parks, stripping protections from Osprey Reef and removing Shark and Vema Reefs from Marine National Park area altogether. This is not to mention the reintroduction of midwater trawling and longlining.

No government anywhere in the world has ever removed this many hectares out of conservation before. It is truly disgusting." Abstract from Shadow Minister for Environment.. Tony Burke..

show your guts to the business lobby and declare a future for human habitation on earth... Regards, Colin McKellar 40 Smith St. Alphington Victoria 3078.
