

Dear Prime Minister Burke,

As an American, I am very concerned about the health of our oceans. The Great Barrier Reef has recently been subject to several significant coral bleaching events which have caused mass die off and adversely effected the environment and ecosystems.

It is most clear that climate change is one of the significant factors for these recent events. In addition, while an entire hemisphere away I have observed how Australia has struggled with Wild Fires, epic heat and draught across parts of your great nation.

I am writing to urge you to take measures to reduce your nations carbon footprint, support and strengthen ecological protections, and continue to raise awareness of the importance of protecting the beauty and wonder of our planet together.

The citizens of the 21st century are connected through our economies, technology, and most importantly through the planet that sustains us all.

It is imperative that we all do our part together to insure there is a healthy ecosystem and planet around for future generations to enjoy.

Thank you for your support!

Sincerely Yours,

Keith Wynne
