

Hallo Minister,

There is a wonderfully growing momentum in the public arena whereby Voters are getting the sense they have the numbers on their side to vote IN legislation and potential parliamentarians who are pro-environmental protection.

They know this because there are SO MANY inventions now and so many alternative – tried and true – means for doing things which we had thought were unchangeable in the realm of pollution. An example is: there is a farmer in Kojonup in WA (others are here just like him, as well) who hasn't used any sprays or any fertiliser for 20 years and his yields are the same as his polluting neighbours.

We actually DON'T HAVE to mess the environment at all to still make money, still have all the luxuries and still live a healthy life.

You already KNOW THAT. You do. And I'm not sure why you choose to deny your own intelligence... guessing, I could say, money is too ingrained in your own brain??? I don't know why you deny it and really guessing is a waste of time.

However, I do call you to honour your wisdom and your real intelligence.

KEEP THE MARINE PROTECTIONS.

Thank you in advance for your outstanding speech in Parliament whereby you advise you have just had given to you NEW details which show all the good things can be had without removing the marine protections and that is why you are now NO LONGER going to push to have them removed.

Much love.

Kylie Whitehead
