

Honourable Minister Frydenberg,

The environment needs help. If there's any time to come up with environmental policy, it is now. Same goes for energy but that's not the point of this communication. Things like the environment don't get a second chance. Marine protection does not need to be diminished. Retaining stocks and diversity is not something that we really have any say in, we must do what we can. I urge you to at the very least maintain what is already in place. I can only ask you to try. I can only hope that you listen.

Thank you.

Yours faithfully,
Chris Naylor
