

Minister Frydenberg,

I write to urge you to stop cutting marine protection, your position and choices are vital to the future and health of our planet.

It is embarrassing to think that these changes will put Australia up there as world leaders in the worst way possible - winding back protection for our oceans.

Stop and think about our children's future, and our future. The oceans are in a dire state. We need all the support we can get, not to rip that support away.

This is something you should be ashamed of.

Put a stop to this.

Regards,

Joelle Peters
