

Dear Minister Frydenberg,

Please reconsider the plans for cutting back the protection of the Australian oceans, it is such a step backwards for Australia and would be a devastating blow to the already threatened Coral sea. Please keep in mind that our children are supposed to inherit this earth and you are basically destroying it for them. There are more important things in life than money, I think you all have lost perspective a bit so maybe go out and try to see the value of the natural environment you are currently trying to demolish.

Best regards,
Hanne Thoen
