

Dear Mr Fryenberg,

Your complete inability to govern never supprises me.

Our oceans, are one of our most precious resources, that many depend on for life itself. The roll back proposed, when our oceans are depleted of fishing stock, polluted and facing increasing temperatures and changes due to climate change is abohorrent.

As a country we should be increasing their protection, building upon existing sanctuaries and allowing for them to flourish which would benefit all people of this country and all marine life and ecosystems.

It is obvious to all, that your policy will lead to incredible environmental destruction destruction, increased overfishing and is against science itself.

Please, I plea to you, stop this absurdity.

Vanessa Graley
