

To Minister Frydenberg
.Parliament House
Canberra.

I very strongly object to your Department in Government working to reduce these areas of National Marine Parks.

The science is that these areas are the breeding grounds for fish nurseries - that in time give the fish caught by professional fishers in the non National marine Parks.

Does your Liberal National Government have a death wish in the coming future election for all the various wrong decisions made by you and your fellow ministers - regarding these proposed cut backs (and in my opinion other wrong moves re the environment) to all these National Marine Parks? Not only the above but also the Mid water trawling proposed to be allowed in these National Marine Parks ! Has your Government lost its way?

Its not only these very serious moves re National Marine Parks that we the electors are seriously considering whether your Government should stay in power?

Its the reluctance re working with business to allow renewables to be used instead of coal. We the electors know renewables are the future - we will remember this at election time if you don't "get with the future of renewables"

.Also your Government is known world wide for the cruelty to refugees arriving by boat seeking protection from our country.

Now you are working to damage the environment again by your moves to cutback National Marine Park areas!

Remember there are many electors in our country Australia who follow closely the moves of your Government

Sincerely
Leonie Waddington
