

Dear Madam, Sir,

Australia has been well known for the Great Barrier Reef - jungles - deserts and more unspoiled territory..... in the old days....

Protecting wild life like the whales and sharks....

Now (the last 25 years) Australia has become the opposite - GBR is under major threat - sharks are getting killed - and you allow the Japanese to kill the whales...really this is such a shame!

From an environmental point of view Australia is moving back wards...this continent could have been the shining example of how to protect nature and its inhabitants, but you choose for fast money by selling your rich minerals etc to China and start thinking about big money instead of protecting what you have.....

Hope Australia will change its destructive course and will come back on the right track and be an example for the rest of the world by:

- * protecting wild life
- * reduce or ban pesticides (contaminated water will come into the sea - GBR!)
- * No nets where not only sharks, but many other marine life, get killed
- * No building in areas susceptible for forest fires - btw catch rain water in the wet season in tanks spread out over mountains with forest and use this water during dry season)
- * use more solar power - you have enough areas where you can put solar panels
- * desalination plants etc etc

Work together with Aboriginals to protect nature and Australia will be the leader of the pack!

Warm regards,
Joan Keijer
