

Dear Minister Frydenburg. I am appalled at the governments decision to reduce the size of our Marine Conservation Areas and open reserves up to fishing and extractive industries. This is a shocking turn of events and should be reversed immediately. We need to conserve the incredibly valuable and delicate marine ecosystems in Australia for our future survival and for future generations. This is such a short sighted political based decision to satisfy your cronies in the shooters and fishers party and quite frankly it stinks. Another example of your government putting politics before good science. I cant believe that you are allowing this to happen and we will all remember it happened UNDER YOUR WATCH!! - good luck explaining that to your grand children and great grandchildren when our oceans around Australia become fished out and degraded.

I implore you to reverse the decision to reduce our Marine Conservation Areas.

Yours sincerely
Trevor Cameron
