

I write to ask you to please

DO NOT REDUCE OUR PRECIOUS MARINE PARKS.

They have been carefully selected after years of research and study and are doing a good job in protecting our marine environment. They also provide valuable breeding grounds for commercial fish stocks in addition to providing safe environments for many rare and threatened marine species.

Current proposals to reduce their area very significantly are very short sighted and generations to come will condemn us if we let their heritage be destroyed. These proposals should be rejected outright. They are just a quick solution to a government looking to gain cheap support.

Yours sincerely,

Brian Snape AM
