

To whom it should concern,

I find it unbelievable that Australia, normally a nation at the forefront of global environmental protection, has such blatant disregard of our future heritage.

We have just had a poll on gay marriage. Let us have another on the decimation of our heritage protection areas.

Those in government need to know that we the people have a great regard for our environmental protection policies.

Any changes that are in the negative, like this reduction in protected areas, are ill conceived.

This proposal needs an immediate rejection and a law change that negates any future negative proposals.

Regards

*Laurie Robertson*
