

Keep protecting our marine waterways. Do not reduce the present Marine national parks now protected.

I object strongly to the reduction of marine waterways and reintroduction of trawling and longline fishing.

These areas should be continued to be protected for the future of marine life and extended.

Do not go backwards on the marine parks as established today and in place.

Conservation of marine life is essential to our own health as planet and food supply.

Trawlers not only take excessive amount of fish - not for Australia's consumption - but many other species are caught and killed.

The fishing companies do not care.

Please do not make changes - protect and conserve our Australian waters.

Let's not forget the tourist dollar. Queensland tourist income is part of our marine national parks and waterways.

Without these protected areas as is what would happen to the very large income provided by tourism?

Protect and conserve Australia's marine parks- waterways.

Protect our marine species. Stop the trawlers out destroying marine habitat.
