

To Whom This May Concern,

I'm writing to you, pleading that you reconsider the decision of giving up any percentage of Australian protected waters.

There are few countries left helping our planet and our environment. It must be protected for the sakes of our children's children and, their happiness and health in the future.

The people in power are the only ones who can make any difference in how damaged the planet gets. Destroying and ripping up the earth (the world we live on), especially in the waters, will fast forward the global warming process. And for what? To make humans life easier?!? Please consider the issues I'm trying to reach to you with?

It is so wrong that we fill our needs for greed and laziness by destroying what made us be today.

We all need to work together to save all humanities future.

Kind Regards,

Arriel M.
