

Our oceans are under threat from all directions, be it pollution, overfishing, climate change. It is chilling to know that in the last 40 years 50% (!!!!!) of wildlife has disappeared from our planet.

We should do our utmost to protect what is left.

If we do not, the last 50% will disappear as well.

And then what are we left with? Dead oceans mean dead people in the end.

Please stop winding back the protections that are in place to protect the oceans.

Regards
