

Ladies and gentleman to be withdrawing this kinda of environmental protection instead of increasing protection at this vital point in the future health of our planet is an absolute crime against humanity and you should all be ashamed of yourselves.

Kindly fucking yourselves dry and against your people's wishes is what your doing ladies and gentleman of the current federal government of Australia.

Constitutional reform is needed.

We need to stand up as international citizens and represent the best interests of humanity.

I believe we need to go beyond gay rights beyond racism beyond environments and religion and have a good hard think about the last few decades and how old our systems are.

Science and experience should govern our future. Not some sleepy drunken highflying fat cats. end the short game popularity politics and actually install some best practise technological infrastructure ya dawgs. Let's make some new jobs installing solar and wind and hydro and thermal powers... imagine that vented gas we burn made 1000's of sausage sizzles! We'd all be really full.

Or a little paddle wheel in a remote waterfall kept an entire remote valley alite, cooking and cleaning?

It's 2017, ffs pull your finger out save our sanctuaries!!! Then create more!! Please.

Thank you for your time.

Sam
