

To the Prime Minister, Please do not reduce our ocean sanctuaries as our oceans need these areas to be fishing free areas so the natural selection in our waters will continue ,so the fish and other sea animals are not under threat from human over fishing in our waters surrounding Australia.By reducing the sanctuary boundaries will lead to more deaths of coral coves as the boats will come closer to the reefs and change the ecosystems that are present.We want to be able to share fishing and our coral reefs with our grandkids and there children while reducing the boundaries which are now present will lead to these opportunities being very limited by the overfishing that occurs outside the sanctuaries now.
Please reconsider this new marine management planning. Marianna Reid
