

The planned changes proposed to reduce the size of Marine Parks around the country seem extremely short sighted to me.

The threat to marine life is escalating as the climate is causing change to the salinity and acidity of the oceans. As if this was not enough threat, you intend to allow more and more fishing.

We also hear in the media that foreign fishers are caught with illegal hauls. This is not able to be controlled by this Government but the management of our shores and fauna is.

Please look after our marine shores and maintain the size of the parks so future generations do not think of our generation as modern vandals.
