

Dear minister.

The attached image has been put together by the leading research team looking after and completing research of the Bremer Canyon and the amazing wildlife that congregates here every year.

The current planned protection zone is simply an insult to the amazing team doing work in this area.

I believe the whole south coast from Albany to Esperance should become a protected zone against oil and gas exploration or drilling.

What we have is a natural wonder of the world and should be protected as all cost. Im requesting you revise the proposed zones and include this whole area, allowing more research to be completed without the threat of industry interference from exploration.

Please reply to this email with a written response as to why the attached zone is not currently being included in the new protection zones.

Kind Regards
Brenton Tidow.
